SNIP Colleagues:

Springer has launched a new website, The NeuroNetwork, that may be of interest to you and your students. I have signed-up for the site and have attached a description given to me by Ann Avouris, Senior Editor, Neuroscience for Springer. I think this site will benefit you and the free flow of ideas in our field and hope you will give it a try.

With best wishes,

Tom Klein
SNIP Secretary

THE NEURONETWORK

The NeuroNetwork is a multidimensional professional networking site dedicated to those working, studying, or simply interested in the science of the brain. We welcome those with personal and professional interests in neuroscience, neurology, psychology, and all related areas -- those studying neural activities in invertebrates up to the human brain, including brain-like systems and networks.

The NeuroNetwork was built to allow students and researchers to find and interact with each other in a professional environment. You may create searchable profiles with your research interests; blog about your ideas; upload poster presentations and videos; post and search job listings; create open and closed discussions; form a virtual "group" based on your interests, geographical location, etc.; and view, post, and RSVP to upcoming meetings. And don't just create a profile for yourself -- create one for your organization, institute, society, or even your lab as well.

Members will also receive free access to selected journal articles and other goodies, and we'll be highlighting the latest and most exciting developments in the field. We hope that you enjoy The NeuroNetwork, and feel free to send us suggestions for improvements and new functionalities that you would like to see implemented.

Ann Avouris
